Work Experience

Software Engineer Intern

Jan 2026 – Present

Carta | Python, Django, gRPC, Jenkins, CircleCI, ArgoCD, Datadog

Kitchener, ON

- Built **devtools-mcp**, a Chrome extension + Node.js MCP server exposing **16 tools** that stream live browser DevTools data (network, console, cookies, storage) directly into Claude Code, eliminating context-switching for engineers during debugging.
- Architected **Project Atlas**, a persistent context memory system for Claude, designing a `.context/` repo structure and custom MCP server integrating Jira, Slack, and Confluence, reducing token consumption by **~86k tokens per investigation session** across agent workflows.
- Reduced CI pipeline runtime by **42%** (12 → 7 min) on Jenkins; maintained **100+ contributions in first 90 days** spanning Django, Python, Datadog, Sentry, CircleCI, and ArgoCD.
- Led **3 projects end-to-end** from scoping to release as primary point of contact, including ERD design, feature flag orchestration, and production job execution on live data.

Associate Conversation Design Intern

May 2025 – Aug 2025

Cresta | LLMs, Google Apps Script, Python

Remote

- Built an **LLM-powered auditing system** that processed **10,000** conversation logs per run and cut manual QA time by **98%**, enabling reviewers to clear multi-week backlogs in under a day.
- Conducted QA for AI agent behavior detection across **12 enterprise clients** including Royal Caribbean, coordinating with customer-facing teams to validate conversation flows and surface edge cases for model improvements.

Founding Engineer (Co-op Rating: Outstanding)

May 2024 – Aug 2024

Conrad Grebel School of Entrepreneurship | React, Next.js, Flutter, Firebase, GCP

Waterloo, ON

- Founded **G12Uni**, an AI-powered university admissions platform, building the full-stack web app (React, Next.js) and mobile app (Flutter, Swift) on Firebase for auth, hosting, and Firestore as the primary database.
- Built **Jado**, an LLM-powered research assistant extending Perplexity-style search with Reddit, YouTube, and web scraping pipelines to surface richer university-specific insights for students.
- Scaled the platform to **40,000** monthly site visits and **2,000+** MAU; pitched to **24 high schools** and secured **5 pilot agreements**, validating product-market fit under university program requirements.
- Deployed containerized services on **GCP** with centralized logging and metrics, improving mean time to detect production issues by **50%** during peak traffic events.

Projects

Clash Royale Analytics Platform | github.com/RhyChaw/clashroyalestats

Python, PostgreSQL, dbt, FastAPI, Streamlit, scikit-learn, XGBoost

- Engineered an end-to-end analytics platform ingesting **50,000+** battle logs per day into **PostgreSQL** via batch pipelines and **dbt** transformations with automated data quality checks.
- Trained and deployed ML models (**scikit-learn/XGBoost**) to serve live win-probability predictions, cutting manual matchup analysis time by roughly **70%**.

Technical Skills

Languages: Python, C++, C, Java, Rust, Go, Bash, JavaScript, TypeScript

Systems & Backend: Docker, Kubernetes, GCP, AWS, Django, FastAPI, Spring Boot, gRPC, PostgreSQL

Testing: pytest, unittest, JUnit, Jest, Testcontainers, integration testing, CI/CD pipelines

Education

University of Waterloo

Sep 2024 – Apr 2028 (Expected)

BCS Honours COOP | AI & HCI Specialization, Minor in Entrepreneurship

Waterloo, ON

- Coursework: Algorithms, Numerical Computation, Probability & Statistics, Linear Algebra, Data Structures.
